Level 3 Economics, 2013

91399 Demonstrate understanding of the efficiency of market equilibrium

9.30 am Monday 18 November 2013

Credits: Four

Achievement	Achievement with Merit	Achievement with Excellence
Demonstrate understanding of the efficiency of market equilibrium.	Demonstrate in-depth understanding of the efficiency of market equilibrium.	Demonstrate comprehensive understanding of the efficiency of market equilibrium.

Check that the National Student Number (NSN) on your admission slip is the same as the number at the top of this page.

You should attempt ALL the questions in this booklet.

If you need more space for any answer, use the page(s) provided at the back of this booklet and clearly number the question.

Check that this booklet has pages 2–8 in the correct order and that none of these pages is blank.

YOU MUST HAND THIS BOOKLET TO THE SUPERVISOR AT THE END OF THE EXAMINATION.

TOTAL

ASSESSOR'S USE ONLY

QUESTION ONE

Complete (a) and (b), to discuss the impact of the tariff removal on efficiency in the New Zealand shoe market:

- (a) (i) On Graph One above, show the impact of the tariff removal on the New Zealand shoe market. Identify the new price (P_{new}), new quantity demanded (Q_2), new quantity supplied by New Zealand producers (Q_3), and new quantity imported (M_{new}).
- (ii) Explain in detail any changes you made to Graph One.

- In your answer:

- on Graph One, use labelling, and shade in areas to show the impact of the tariff removal on allocative efficiency in the New Zealand shoe market
- explain the changes in consumer surplus, producer surplus, and government tariff revenue
- refer to changes you made on Graph One
- explain the impact on overall allocative efficiency.

QUESTION TWO

ASSESSOR'S
USE ONLY

Graphs Two and Three show two similarly-priced products with differing price elasticities of demand.

Complete (a) and (b) to discuss the impact of \$1 tax on the efficiency in the market for goods which are price elastic, and for goods which are price inelastic.

(a) In Table One below, use the labels from **Graph Two** to identify:

Table One

	Labels from Graph Two
The new equilibrium price and quantity	
The change in consumer surplus	
The change in producer surplus	
The tax revenue for government	
The deadweight loss	

(b) Compare and contrast the impact of the \$1 tax on the efficiency in the market for each good. In your answer:

- explain in detail, using market forces, the change in market equilibrium for **either** good
- explain in detail, for **each** good, the changes to consumer surplus, producer surplus, and allocative efficiency
- compare and contrast the impact of the \$1 tax on consumers, producers, the government, and efficiency, when the goods have different price elasticities
- refer to both graphs.

ASSESSOR'S
USE ONLY

Rising rents are likely to become as much of a political issue as unaffordable house prices.

According to research, Auckland house rents are rising faster than both wages and inflation. The rising rents are being driven by a shortage caused by increasing demand.

Graph Four – Rental housing market in Auckland

The graph illustrates the rental housing market in Auckland, showing the relationship between Rent (\$) and Quantity. The supply curve (S) is upward sloping, starting at point a . The demand curve (D) is downward sloping, starting at point b . A horizontal line at price P_1 represents the maximum rent (P_{\max}). The equilibrium point e is where the supply curve intersects the demand curve D at price P_1 and quantity Q_1 . The equilibrium point c is where the supply curve intersects the demand curve D_1 at price P_2 and quantity Q_2 . Point d is on the demand curve D_1 at price P_3 and quantity Q_1 . Point f is on the demand curve D at price P_3 and quantity Q_3 . Dashed lines indicate the corresponding price and quantity for each point.

- (a) Explain in detail, using market forces, how the increased demand causes rising rents. Refer to Graph Four in your answer.

(b) Compare and contrast the situation of leaving the market at the new equilibrium, with the effect of setting a maximum rent at P_1 on the rental housing market in Auckland.

- consumer surplus
- producer surplus
- allocative efficiency
- the government's goal of affordable rents for more people.

Extra space if required.
Write the question number(s) if applicable.
